DETAILED OFFICE ACTION

Applicant's amendment filed on 27 August 2003 is acknowledged and entered. Following the amendment, claims 10-13 are canceled, claims 1 and 8 are amended, and the new claims 14 and 15 are added.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Johnson on 12 November 2003.

The application has been amended as follows:

Claims 8, 9 and 15 have been cancelled.

Rejoin

Claims 1-4 are generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 6 and 7, directed to a method for treating post-operative adynamic ileus and intolerance to oral feeding, respectively, using IL-11 are no longer withdrawn from consideration since all of the claims to these species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Currently, claims 1-7 and 14 are pending and under consideration.

Examiner's Statement of Reasons for Allowance

The following is an examiner's statement of reasons for allowance: claims 1-7 and 14 of the present invention are directed to a method for treating a gastrointestinal motility disorder including gastroesophageal reflux disease, post-operative adynamic ileus and intolerance to oral feeding by administering IL-11. The specification teaches that IL-11 increases levels of motilin, and demonstrates such in the working example, Example 2. Prior art search reveals that motilin induces phase III activity of the gastrointestinal tract including phasic contractions of the lower esophageal sphincter (LES), and increases the LES pressure, and that motilin and its agonists are beneficial to gastroesophageal reflux disease, post-operative adynamic ileus, and intolerance to oral feeding in preterm infants. However, the prior art does not teach or suggest that IL-11 increases levels of motilin.

Conclusion:

Claims 1-7 and 14 are allowed.
